Regular expressions

$$e, f \in \text{Reg}_X ::= 0 \mid 1 \mid x \in X \mid e \cdot f \mid e \cup f \mid e^*$$

Interpretations

Regular expressions

$$e, f \in \text{Reg}_X ::= 0 \mid 1 \mid x \in X \mid e \cdot f \mid e \cup f \mid e^*$$

Interpretations

- languages*: Σ a finite set, $\sigma : X \rightarrow \mathcal{P}(\Sigma^*)$,
 \emptyset , $\{\epsilon\}$, concatenation, union

Rational languages correspond to $\llbracket _ \rrbracket : X \rightarrow \mathcal{P}(X^*)$

$$x \mapsto \{x\}.$$

Regular expressions

$$e, f \in \text{Reg}_X ::= 0 \mid 1 \mid x \in X \mid e \cdot f \mid e \cup f \mid e^*$$

Interpretations

- *languages*: Σ a finite set, $\sigma : X \rightarrow \mathcal{P}(\Sigma^*)$,
 \emptyset , $\{\epsilon\}$, concatenation, union
- *relations*: S a set, $\sigma : X \rightarrow \mathcal{P}(S \times S)$,
 \emptyset , Id_S , composition, union

Rational languages correspond to $\llbracket _ \rrbracket : X \rightarrow \mathcal{P}(X^*)$
 $x \mapsto \{x\}$.

Regular expressions

$$e, f \in \text{Reg}_X ::= 0 \mid 1 \mid x \in X \mid e \cdot f \mid e \cup f \mid e^*$$

Interpretations

- *languages*: Σ a finite set, $\sigma : X \rightarrow \mathcal{P}(\Sigma^*)$,
 \emptyset , $\{\epsilon\}$, concatenation, union
- *relations*: \mathbf{S} a set, $\sigma : X \rightarrow \mathcal{P}(\mathbf{S} \times \mathbf{S})$,
 \emptyset , Id_S , composition, union

Rational languages correspond to $\llbracket _ \rrbracket : X \rightarrow \mathcal{P}(X^*)$
 $x \mapsto \{x\}$.

Model equivalence

$e, f \in \text{Reg}_X$

$$\text{Rel} \models e = f \quad \text{if} \quad \forall S, \forall \sigma : X \rightarrow \mathcal{P}(S \times S), \sigma(e) = \sigma(f)$$

Model equivalence

$$e, f \in \text{Reg}_X$$

$$\text{Rel} \models e = f \quad \text{if} \quad \forall S, \forall \sigma : X \rightarrow \mathcal{P}(S \times S), \sigma(e) = \sigma(f)$$

Theorem

$$\text{Rel} \models e = f \Leftrightarrow \llbracket e \rrbracket = \llbracket f \rrbracket$$

Kleene Allegories

$e, f \in \text{Reg}_X^{\sim \cap}$::= 0 | 1 | $x \in X$ | $e \cdot f$ | $e \cap f$ | $e \cup f$ | e^* | e^{\sim}

Kleene Allegories

$$e, f \in \text{Reg}_X^{\sim} ::= 0 \mid 1 \mid x \in X \mid e \cdot f \mid e \cap f \mid e \cup f \mid e^* \mid e^{\sim}$$

$$\text{Rel} \models e = f \Leftrightarrow \llbracket e \rrbracket = \llbracket f \rrbracket$$

Example

$\llbracket a \cap b \rrbracket = \emptyset = \llbracket 0 \rrbracket$ $\sigma(a) = \{(x, y), (y, z)\}$ $\sigma(b) = \{(y, z), (z, t)\}$ $\sigma(a \cap b) = \{(y, z)\} \neq \emptyset = \sigma(0)$	$\llbracket a \rrbracket = \{a\} = \llbracket a^{\sim} \rrbracket$ $\sigma(a) = \{(x, y)\}$ $\sigma(a^{\sim}) = \{(y, x)\} \neq \sigma(a)$
---	--

A different approach is needed.

Graphs/Ground terms

$$u, v \in W_X ::= 0 \mid 1 \mid x \in X \mid u \cdot v \mid u \cap v \mid u \cup v \mid u^* \mid u^\sim$$

Graphs/Ground terms

$$G(1) := \rightarrow \circ \rightarrow$$

$$G(x) := \rightarrow \circ \xrightarrow{x} \circ \rightarrow$$

$$G(u^\sim) := \leftarrow \circ - G(u) \rightarrow \circ \leftarrow$$

$$G(u \cdot v) := \rightarrow \circ - G(u) \rightarrow \circ - G(v) \rightarrow \circ \rightarrow$$

$$G(u \cap v) := \rightarrow \circ \begin{array}{l} \curvearrowright G(u) \\ \curvearrowleft G(v) \end{array} \rightarrow \circ \rightarrow$$

Graphs/Ground terms

$$G(1) := \rightarrow \circ \rightarrow$$

$$G(x) := \rightarrow \circ \xrightarrow{x} \circ \rightarrow$$

$$G(u^\sim) := \leftarrow \circ \leftarrow G(u) \rightarrow \circ \leftarrow$$

$$G(u \cdot v) := \rightarrow \circ \leftarrow G(u) \rightarrow \circ \leftarrow G(v) \rightarrow \circ \rightarrow$$

$$G(u \cap v) := \rightarrow \circ \begin{array}{l} \swarrow G(u) \\ \searrow G(v) \end{array} \rightarrow \circ \rightarrow$$

Example

$$G(a \cdot b): \rightarrow \circ \xrightarrow{a} \circ \xrightarrow{b} \circ \rightarrow$$

Graphs/Ground terms

$$G(1) := \rightarrow \circ \rightarrow$$

$$G(x) := \rightarrow \circ \xrightarrow{x} \circ \rightarrow$$

$$G(u^\sim) := \leftarrow \circ \leftarrow G(u) \rightarrow \circ \leftarrow$$

$$G(u \cdot v) := \rightarrow \circ \rightarrow G(u) \rightarrow \circ \rightarrow G(v) \rightarrow \circ \rightarrow$$

$$G(u \cap v) := \rightarrow \circ \begin{array}{l} \nearrow G(u) \\ \searrow G(v) \end{array} \rightarrow \circ \rightarrow$$

Example

$$G(a \cdot b): \rightarrow \circ \xrightarrow{a} \circ \xrightarrow{b} \circ \rightarrow$$

$$G((a \cdot b) \cap (c \cdot b)): \rightarrow \circ \begin{array}{l} \nearrow \xrightarrow{a} \circ \xrightarrow{b} \circ \\ \searrow \xrightarrow{c} \circ \xrightarrow{b} \circ \end{array} \rightarrow \circ \rightarrow$$

Graphs/Ground terms

$$G(1) := \rightarrow \circ \rightarrow$$

$$G(x) := \rightarrow \circ \xrightarrow{x} \circ \rightarrow$$

$$G(u^\sim) := \leftarrow \circ \leftarrow G(u) \rightarrow \circ \leftarrow$$

$$G(u \cdot v) := \rightarrow \circ \rightarrow G(u) \rightarrow \circ \rightarrow G(v) \rightarrow \circ \rightarrow$$

$$G(u \cap v) := \rightarrow \circ \begin{array}{l} \nearrow G(u) \\ \searrow G(v) \end{array} \rightarrow \circ \rightarrow$$

Example

$$G(a \cdot b): \rightarrow \circ \xrightarrow{a} \circ \xrightarrow{b} \circ \rightarrow$$

$$G((a \cdot b) \cap (c \cdot b)): \rightarrow \circ \begin{array}{l} \nearrow \xrightarrow{a} \circ \xrightarrow{b} \rightarrow \\ \searrow \xrightarrow{c} \circ \xrightarrow{b} \rightarrow \end{array} \rightarrow \circ \rightarrow$$

$$G(((a \cap c) \cdot b) \cap d): \rightarrow \circ \begin{array}{l} \nearrow \xrightarrow{a} \circ \xrightarrow{b} \rightarrow \\ \searrow \xrightarrow{c} \circ \xrightarrow{b} \rightarrow \end{array} \rightarrow \circ \rightarrow$$

Graphs/Ground terms

$$G(1) := \rightarrow \circ \rightarrow$$

$$G(u \cdot v) := \rightarrow \circ \rightarrow G(u) \rightarrow \circ \rightarrow G(v) \rightarrow \circ \rightarrow$$

$$G(x) := \rightarrow \circ \xrightarrow{x} \circ \rightarrow$$

$$G(u \cap v) := \rightarrow \circ \begin{array}{l} \nearrow G(u) \\ \searrow G(v) \end{array} \rightarrow \circ \rightarrow$$

$$G(u^\sim) := \leftarrow \circ \rightarrow G(u) \rightarrow \circ \leftarrow$$

Example

$$G(a \cdot b): \rightarrow \circ \xrightarrow{a} \circ \xrightarrow{b} \circ \rightarrow$$

$$G((a \cdot b) \cap (c \cdot b)): \rightarrow \circ \begin{array}{l} \xrightarrow{a} \circ \xrightarrow{b} \circ \rightarrow \\ \xrightarrow{c} \circ \xrightarrow{b} \circ \rightarrow \end{array}$$

$$G(((a \cap c) \cdot b) \cap d): \rightarrow \circ \begin{array}{l} \xrightarrow{a} \circ \xrightarrow{b} \circ \rightarrow \\ \xrightarrow{c} \circ \xrightarrow{b} \circ \rightarrow \end{array}$$

$$G((a \cdot b) \cap 1):$$

Characterization theorem

\triangleleft is a preorder on graphs.

Theorem

$u, v \in W_X,$

$$\text{Rel} \models u \leq v \Leftrightarrow G(u) \triangleleft G(v)$$

The equational theory of union-free algebras of relations.
Alg. Univ., 33(4):516–532, 1995

Graphs/Ground terms languages

$$\llbracket _ \rrbracket : \text{Reg}\tilde{X}^{\cap} \rightarrow \mathcal{P}(W_X)$$

$$\llbracket 0 \rrbracket := \emptyset$$

$$\llbracket 1 \rrbracket := \{1\}$$

$$\llbracket x \rrbracket := \{x\}$$

$$\llbracket e^\sim \rrbracket := \{w^\sim \mid w \in \llbracket e \rrbracket\}$$

$$\llbracket e \cdot f \rrbracket := \{w \cdot w' \mid w \in \llbracket e \rrbracket \text{ and } w' \in \llbracket f \rrbracket\}$$

$$\llbracket e \cap f \rrbracket := \{w \cap w' \mid w \in \llbracket e \rrbracket \text{ and } w' \in \llbracket f \rrbracket\}$$

$$\llbracket e \cup f \rrbracket := \llbracket e \rrbracket \cup \llbracket f \rrbracket$$

$$\llbracket e^* \rrbracket := \bigcup_{n \in \mathbb{N}} \{w_1 \cdots w_n \mid \forall i, w_i \in \llbracket e \rrbracket\} .$$

Graph language of an expression

$$e \in \text{Reg}\tilde{X}^{\cap},$$

$$G(e) := \{G(w) \mid w \in \llbracket e \rrbracket\} .$$

Characterization theorem

$\blacktriangleleft S$ is the downwards closure of S with respect to \blacktriangleleft .

Theorem

$e, f \in \text{Reg}_X^{\checkmark\cap}$,

$$\text{Rel} \models e \leq f \Leftrightarrow \blacktriangleleft G(e) \subseteq \blacktriangleleft G(f)$$

Almost proven in:

H. Andr eka, S. Mikul as, and I. N emeti. [The equational theory of Kleene lattices.](#)
TCS, 412(52):7099–7108, 2011

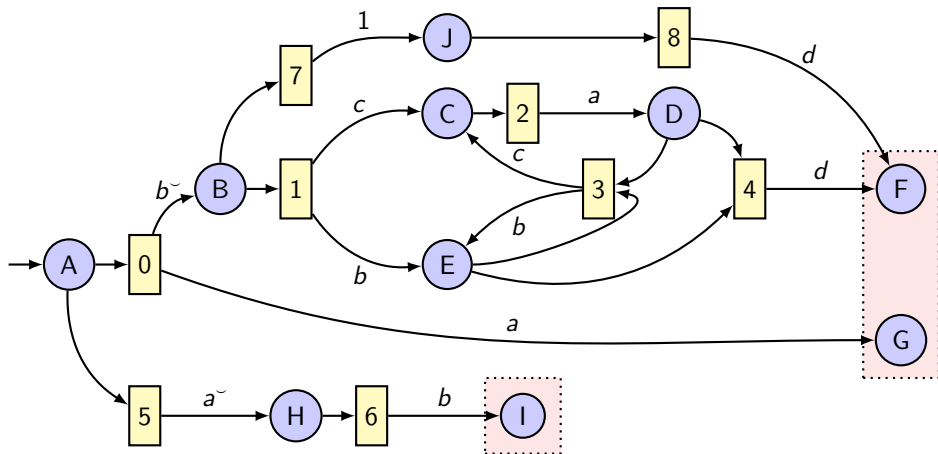

Example

$$(((a \cap c) \cdot b) \cap d) \cup a$$

Example

$$(b^{\sim} \cdot (a \cdot c \cap b)^{\star} \cdot d) \cap a \cup a^{\sim} \cdot b$$

Language recognised by an automaton

Correctness

For any $e \in \text{Reg}_X^{\cup}$,

e

Language recognised by an automaton

Correctness

For any $e \in \text{Reg}_X^{\cup}$,

$$\mathcal{A}(e)$$

Language recognised by an automaton

Correctness

For any $e \in \text{Reg}_X^{\cup}$,

$$\mathcal{L}(\mathcal{A}(e))$$

Language recognised by an automaton

Correctness

For any $e \in \text{Reg}_X^{\cup}$,

$$\mathcal{L}(\mathcal{A}(e)) = \mathcal{G}(e).$$

Language recognised by an automaton

Correctness

For any $e \in \text{Reg}_X^{\cup}$,

$$\mathcal{L}(\mathcal{A}(e)) = \mathbf{A}G(e).$$

This far:

$e, f \in \text{Reg}_X^{\cup}$

$$\text{Rel} \models e \leq f \Leftrightarrow \mathbf{A}G(e) \subseteq \mathbf{A}G(f) \Leftrightarrow \mathcal{L}(\mathcal{A}(e)) \subseteq \mathcal{L}(\mathcal{A}(f)).$$

Restriction: identity-free lattice terms

$G((a \cdot b) \cap 1)$:

$G(a \cap b^{\sim})$:

Restriction: identity-free lattice terms

 $G((a \cdot b) \cap 1)$: $G(a \cap b^\sim)$:

$$u, v \in W_X^- ::= 0 \mid 1 \mid x \in X \mid u \cdot v \mid u \cap v \mid u \cup v \mid u^* \mid u^\sim$$

Identity-free Kleene Lattice

$$e, f \in \text{Reg}_X^{\cap -} ::= 0 \mid 1 \mid x \in X \mid e \cdot f \mid e \cap f \mid e \cup f \mid e^+ \mid e^\sim$$

Conclusion and future work

Results

- **Reduction** of relational equivalence to equality of closed graph languages.

Ongoing/Future work

Conclusion and future work

Results

- **Reduction** of relational equivalence to equality of closed graph languages.
- Representation of closed graph languages through **Petri automata**.

Ongoing/Future work

Conclusion and future work

Results

- **Reduction** of relational equivalence to equality of closed graph languages.
- Representation of closed graph languages through **Petri automata**.
- **Decidability** of simple automata equivalence, thus of relational equivalence for Identity-free Kleene Lattices.

Ongoing/Future work

Conclusion and future work

Results

- **Reduction** of relational equivalence to equality of closed graph languages.
- Representation of closed graph languages through **Petri automata**.
- **Decidability** of simple automata equivalence, thus of relational equivalence for Identity-free Kleene Lattices.
- Simple Petri automata equivalence is **EXPSPACE-complete**.

This decision procedure was implemented in OCAML, and is available as an online application.

Ongoing/Future work
